Pour-Over Coffee

A beginner's brewing guide

Campus Coffee Club
Issue No. 1

Pour-over is one of the simplest ways to brew *clean* and *bright* coffee at home. You pour hot water slowly over ground coffee in a paper filter, and gravity does the rest. The method is cheap, quiet, and gives you full control over every variable.

This guide follows the brewing recommendations of the Specialty Coffee Association. Read it once before you start; the whole process takes about **four minutes**.

What you need

- A dripper and a paper filter
- **15 g** of medium-fine ground coffee
- **250 g** of water, just off the boil
- A kettle, a scale, and a timer

Brewing steps

1. Rinse the paper filter with hot water and throw that water away.
2. Add the coffee and shake the dripper gently to level the bed.
3. Pour about **40 g** of water and wait 30 seconds.
   - This step is called the *bloom*.
   - Fresh coffee will bubble as it releases gas.
4. Pour the rest of the water slowly in small circles.
5. Remove the dripper when the water has drained, and enjoy.

Troubleshooting

? **Sour:** grind finer, or use hotter water.

? **Bitter:** grind coarser, or pour faster.

! **Never** reuse a filter or old grounds.

Tip: change only one thing at a time.
